

Prosecco

Spumante Extra Dry - White Label

“Simmetrie”

A Brief History

Prosecco became the icon of the Italian aperitif thanks to the innovative production method invented by Federico Martinotti in 1895 (perfected by Charmat in 1907) and subsequently by the ingenuity of Venetian businessmen. There are many advantages to this method, which involves refermentation not in bottles but in a stainless-steel container called an autoclave. In the 1980s, producers from Treviso introduced the aperitif as a new way of drinking wine, highlighting the fresh and versatile characteristics of Prosecco.

This trend contributed to the creation of the largest Denominazione di Origine Controllata in the world.

The San Polo estate, now Giol, made a name for itself as early as 1895 by distributing Prosecco vines (Glera) throughout Europe in the 'international vine' category, demonstrating a far-sighted vision that anticipated the international success of Prosecco.

This farsighted vision contributed to the success that Prosecco would later achieve. We are proud to be not only one of the most historic producers in the world, but also one of the first to embrace the world of Prosecco.

Characteristics

Pale straw yellow sparkling wine with greenish highlights and a fine persistent bead. Pronounced fruity nose, with white-fleshed fruit, apples and peaches, and floral notes of wisteria and acacia blossom, completed by hints of crusty bread and yeast. On the palate it is well balanced and delicately dry, characterised by a pleasant acidulous flavour and good structure. Excellent as an aperitif and for toasts, and a good accompaniment to fine biscuits. It also goes well with vegetable and light fish hors d'oeuvres, soups and starters, pasta and risottos. Serve at 8-10°C.

Profile Contents

grape varieties	Glera (Prosecco)
appellation	Denominazione di Origine Controllata Treviso
year of planting	2004/2007
soil	gravelly clay/sand and silt
vine spacing	1.00 x 2.80 m
pruning	syloz on upward-trained vertical-trellised vines
yield/hectare	14 t
alcohol content	11.00 vol.%
residual sugar	18 g/l
acidity	5.30 g/l
ph	3.30
pressure	5 bar

Vinification

Mechanical harvest at optimum technological ripeness, crushing-destemming, pressing, cold settling and addition of cultured yeasts. Controlled cold fermentation at 14°C. Fermentation is followed by racking, light clarification to stabilise the proteins and subsequent filtration. Bottling is performed after second fermentation in steel pressure tanks (autoclaves), where the internal pressure increases for a month to around 5 atm until fermentation is complete. The wine is then clarified before final filtration.
